

# SILENT INDOOR GAS-FREE BACKUP POWER

**POWERREADY**<sup>TM</sup>  
PATENT  
PENDING  
INDOOR POWER SYSTEMS

"Zoning laws in my development prohibit the installation of a standby generator. I searched everywhere for a safe and silent product. I was so happy to find the indoor, gas-free PowerReady™ IPS™! Not only do I enjoy having it at home, but I've used it three times at the office!"

—Maria Elena Aria

### How it Works

The PowerReady™ IPS™ is emission-free, about the size of a utility cabinet, and can be placed anywhere indoors.

The PowerReady Indoor Power System (IPS) measures 36.5" wide x 36.5" tall x 24" deep, comes with a standard wall outlet plug and requires no installation or permitting. Simply plug the PowerReady IPS into the wall outlet at your home or business and the unit will sense when the electricity has been turned off, and any appliance connected to the outlets will automatically start within one second or you can activate the IPS with the on/off button. The PowerReady IPS can also be professionally connected to a load center (by a licensed electrician) to automatically and remotely power select necessities. By storing energy in 4 proprietary commercial grade batteries the PowerReady IPS will provide emergency power for 4-5 days (based on 3000W per 24 hrs). When power returns, a full recharge typically takes 1-3 hours.

For extended outages the PowerReady IPS Solar Panels (sold separately) can be plugged into the IPS for continuous, cost free and maintenance free power. Connecting Solar Panels to the PowerReady IPS 12000 will afford approximately 12 days (based on 2000W of solar input a day) instead of 4-5 days (based on 3000W per 24 hrs) of power (from the battery) because the panels recharge the unit while it is being used.

"During the last hurricane we had to close our office because we lost electricity and therefore we couldn't service our clients who were frantically trying to reach us to file insurance claims. With the PowerReady™ IPS™ we can remain open under almost any circumstance!"

— Peggy Waite

## Solutions

The PowerReady™ IPS™ is ideal for a myriad of residential, business and healthcare applications.

The PowerReady Indoor Power System (IPS) bridges the gap between UPS systems that provide seamless backup power, but only to a single device, and automatic generators, which require permits, complex installation, fuel, frequent maintenance and deliver poor power quality. Indoor application, silent operation, Pure Sine Wave Technology (for sensitive equipment) and portability make the PowerReady IPS ideal for homes, businesses and medical facilities and all types of applications, including but not limited to:

- |                           |   |
|---------------------------|---|
| Lights                    | Security Devices                        |
| Telephones & Cell Phones  | Fax Machines & Copiers                  |
| Refrigerator & Microwave  | Computers, Printers, Routers & Modems   |
| Small Kitchen Appliances  | Sensitive Electronic Devices            |
| Television, Stereo, Radio | Medical Equipment                       |
| Multimedia Equipment      | Load Center adds Wired Lighting         |
| Portable Air Conditioners | Load Center adds Garage Door Opener     |
| Portable Fans             | Load Center adds Ceiling & Exhaust Fans |
| Electric Tools            | Load Center adds Alarm System           |

"I purchased a PowerReady™ IPS™ for my office. We've had a few power outages since then and the IPS kept my operating room, phones and computer equipment running seamlessly throughout each outage. I couldn't be more pleased and the peace of mind it provides is more than worth the modest cost."

— Dr. Dwight Reynolds

### PowerReady™ IPS™ Benefits

Safe, silent and portable operation make the PowerReady IPS ideal for a myriad of applications!

- + Indoor Generator
- + Fuel & Emission Free
- + Completely Silent Operation
- + No Installation or Permits Required
- + No Maintenance Required
- + Automatic Start or One-Touch Button
- + No Moving Parts or Fires to Worry About
- + Does Not Emit CO2 or other Dangerous Fumes
- + Environmentally Safe, Green Certified
- + Approved by Condo & Home Associations
- + Exceeds Health Care Accreditation Standards
- + Pure Sine Wave Technology
- + Safe for Medical Devices & Sensitive Electronics
- + Reusable & Rechargeable Energy Source
- + Solar Panels Available for Extended Outages
- + Portable (On Wheels)
- + Made in the USA

"Our neighbors installed a standby generator after a year of headaches with permitting and installation. It's large, loud and ugly, emits CO2 and costs them a lot to maintain. When we heard about the gas-free, emission-free, maintenance-free, indoor PowerReady™ IPS™ we were elated and ordered one!"

— Greg Fahs

### PowerReady™ Indoor Power Systems

The PowerReady™ IPS™ provides the power you need to keep your electricity running smoothly.

Our modern, on-demand lifestyles depend upon a reliable supply of electricity; however, growing demands are straining our infrastructure and escalating the frequency of voltage surges, sags, outages, and weather-related power losses.

Traditional gas and propane generators have several disadvantages, including space constraints, local regulations and permitting, costly installations, regular maintenance, noise, dangerous and polluting fumes, and low-quality power which can damage sensitive electronics.

PowerReady International provides a complete solution to put you back in control of your power supply. From surviving frequent power outages to protecting sensitive electronic equipment to maximizing the efficiency of your home and reducing your carbon footprint.

The PowerReady IPS is a completely silent, indoor, gas and emissions free, permit, installation and maintenance free generator suitable for residential, commercial or medical purposes.
